Art Unit: 3609

Detailed Action

Status of Claims

1. This action is in reply to the Application filled on 03/06/2002.

2. Of the original claims 1-22 filed on 03/06/2002, claim 4 have been amended and claims 1-22 has been filed

on 4/27/2004

3. Claims 1-22 are currently pending and have been examined.

Information Disclosure Statement

4. The Information Disclosure Statement filed on 06/20/2005 has been considered. An initialed copy of the

Form 1449 is enclosed herewith.

Inventorship

5. This application currently names joint inventors. In considering patentability of the claims under 35

U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned

at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is

advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that .

was not commonly owned at the time a later invention was made in order for the examiner to consider the

applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 3609

Drawings

- 6. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: Fig 4, items HDg and HDf. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application.
- 7. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference characters "4" and "1" have both been used to designate Public Line of fig 1. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application.
- 8. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: Fig 7, item 20. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application.

Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be

Art Unit: 3609

renumbered and appropriate changes made to the brief description of the several views of the drawings for

consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining

figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top

margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not

accepted by the examiner, the applicant will be notified and informed of any required corrective action in

the next Office action. The objection to the drawings will not be held in abeyance.

Specification

9. The abstract of the disclosure is objected to because of the use of legal phraseology. Applicant is

reminded of the proper language and format for an abstract of the disclosure. The abstract should be in

narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150

words. It is important that the abstract not exceed 150 words in length since the space provided for the

abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in

patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure

sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for

details.

10. The disclosure is objected to because of the use of "appended claims". Uses of such words are objected to

because submission of an amendment of the claims may result on having a different scope to the claims.

Appropriate correction is required.

Art Unit: 3609

11. The disclosure is objected to because of the following informalities: abbreviation of "Internet I" is not shown in the drawings. Appropriate correction is required.

Claim Rejections-35 USC § 101

12. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

- Claims 1 and 12 are rejected under 35 U.S.C. 101 because the claimed invention is directed to nonstatutory subject matter.
- Claims 1,12 are directed to storing, transmitting and receiving data without providing for how the data is used to achieve a "useful, concrete and tangible result" (State Street Bank & Trust Co. v. Signature Financial Group Inc., 47 USPQ2d 1596 (Fed. Cir. 1998)). Claims 1 and 12 are directed to awarding a privilege. However, a privilege, given it's broadest reasonable interpretation (In re Zletz) is at least not a tangible. Therefore, claims 1 and 12 are directed to non-statutory subject matter. The terminal of claim 1, however, lacks utility as Applicant has failed to disclose enough information about the claimed terminal to make its usefulness immediately apparent to those familiar with the technological field of the invention (MPEP 2107.01).

Claim Rejections-35 USC § 112

- 15 The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- Claims 1-4, 6-9,11-15,17,19,20,22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite 16 for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 17 Claim 1 recites the limitation "wherein apparatus estimates a value of the information". For purpose of examination, it was assumed that "apparatus" was intended to be an information providing business for providing information.
- 18 Further more claims 1-4, 6-9,11-15,17,19,20,22 recite the limitation "transmitting a provision medium over communications network". However, to one of ordinary skill a "medium" is a physical object (e.g. Internet, DVD, flash memory) and cannot be transmitted. Therefore, the scope and operation of Applicant's claimed method, system, and device, is not clear to one of ordinary skill (In re Zletz, 13 USPQ2d 1320 (Fed. Cir. 1989)).
- 19 Claim 6 recites the limitation "publicizing the information of the information provider using a provision medium capable of". However, it has been that actions that may or may not be done are indefinite and does not distinguish the claim from the prior art (In re Collier, 158 USPQ 266 (CCPA 1968)), therefore

Application/Control Number: 10/090,640

Art Unit: 3609

23

claim 6 is rejected under 112 second paragraph. Further more, claim 8 recites "the privilege is a prize

Page 7

money obtainable from advertising rate".

Claims 7-11 are also rejected as each depends from claim 6.

21 Claim 17 recites the limitation "publicizing the information of the information provider using a provision

medium capable of". However, it has been that actions that may or may not be done are indefinite and

does not distinguish the claim from the prior art (In re Collier, 158 USPQ 266 (CCPA 1968)), therefore

claim 6 is rejected under 112 second paragraph.

Claims 18-22 are also rejected as each depends from claim 17.

The term "relatively high" in claims 6 and 17 is a relative term, which renders the claim indefinite. The

term "relatively high" is not defined by the claim, the specification does not provide a standard for

ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of

the scope of the invention.

Examiner's Note: The Examiner has pointed out particular references contained in the prior art of record

within the body of this action for the convenience of the Applicant. Although the specified citations are

representative of the teachings in the art and are applied to the specific limitations within the individual

claim, other passages and figures may apply. Applicant, in preparing the response, should consider fully

the entire reference as potentially teaching all or part of the claimed invention, as well as the context of the

passage as taught by the prior art or disclosed by the Examiner.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness

rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as

set forth in section 102 of this title, if the differences between the subject matter sought to be

patented and the prior art are such that the subject matter as a whole would have been obvious

at the time the invention was made to a person having ordinary skill in the art to which said

subject matter pertains. Patentability shall not be negatived by the manner in which the invention

was made.

25

Claims 1, 6, 12 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lundahl et al. (US

2002/0107858 A1) in view of Mankovitz (US 5,703,795 A).

Claims 1, 6, 12, and 17:

Lundahl, in at least paragraphs 0086, 0107, and 0119 discloses the limitation of information value

estimating means for estimating a value of the information of the information provider based on

the number of times the information of the information provider is received at the information

receiver terminal by way of the provision medium. Lundahl does not specifically disclose

privilege awarding means for awarding a privilege to the information provider in accordance with

the information value that is estimated by the information value estimating means so as to give the

privilege to the information provider if the estimated information value is relatively high.

Mankovitz, however, in at least column 2, lines 31-39 discloses, "Advertising rates for

commercials of television programs are determined by the expected size of viewer audience for a

predetermined number of television programs. These expectations are usually determined by the

estimated audience sizes of previously broadcast shows. For example, for a weekly television

series, the estimate of audience size for upcoming episodes is based on the estimated size of

previously broadcast shows. In addition, advertising rates may be adjusted based on an "after the

fact" estimation of the market share for the televised program." Mankovitz does not explicitly

disclose that payment is made to the information provider by the advertising rate income.

However, it would have been obvious to one of ordinary skill in the art at the time of the invention

to combine Lundahl's information value estimation technique with Mankovitz's method of paying

for information by selling advertising space because, as shown by Mankovitz, the size of a

viewing audience determines the value of the advertising rate, and in turn, the value of the

information viewed.

Claims 2, 8, 13, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lundahl et al. (US

2002/0107858 A1) in view of Mankovitz (US 5,703,795 A).

Claims 2, 8, 13, and 19:

Lundahl does not specifically disclose the privilege that is at least a part or whole of an

advertising rate of an advertisement placed in the provision medium; the privilege is prize money

obtainable from the advertising rate of the advertisement placed on the provision medium and/or

a communication charge refund obtainable from a part of a communication charge of the

communication medium; however Lundahl discloses in paragraph 0107 that "data analyzed could

again be related to Internet-based advertising, the various data matrices including: numerical

measures of the outcomes of a web-viewing event; common measures of qualities of a web page

viewer; and common measures of the content displayed on a web page." Mankovitz, however, in

at least column 2, lines 31-39 discloses, "Advertising rates for commercials of television programs

are determined by the expected size of viewer audience for a predetermined number of television

programs. These expectations are usually determined by the estimated audience sizes of

Art Unit: 3609

previously broadcast shows. For example, for a weekly television series, the estimate of audience size for upcoming episodes is based on the estimated size of previously broadcast shows. In addition, advertising rates may be adjusted based on an "after the fact" estimation of the market share for the televised program." However, it would have been obvious to one of ordinary skill in the art at the time of the invention to combine Lundahl's data analysis technique using Internet and web-viewing event with Mankovitz's method of paying for information by selling advertising

space because, as shown by Mankovitz, the size of a viewing audience determines the value of the

advertising rate, and in turn, the value of the information viewed.

Claims 3, 4, 5, 7, 11, 14, 15, 16, 18, and 22 and are rejected under 35 U.S.C. 103(a) as being unpatentable over Lundahl/Mankovitz and further in view of Hong (US 2002/0062372 A1).

Claims 3, 4, 5, 7, 11, 14, 15, 16, 18, and 22:

With regard to the limitations of:

- the provision medium is transmitted through a communication medium;
- the provision medium is a web page publicized on the Internet;

See at least Lundahl, paragraphs 0107.

The combination of Lundahl/Mankovitz discloses the limitations as shown in the rejections above. Lundahl/Mankovitz do not disclose:

- the number of accesses to the web page is displayed thereon;
- the apparatus estimates the value of information based on the number of accesses to the web page;
- a database for setting number of times the information of the information provider is

 received at the information receiver terminal by way of the provision medium, wherein

Art Unit: 3609

the information value estimating means estimates the value of the information of the

information provider based on the database;

Hong, however, in at least paragraph 0073 discloses a web page hit counter and its "hotness." It

would have been obvious to one of ordinary skill in the art at the time of the invention to modify

Lundahl/Mankovitz with Hong because tracking the amount of hits a web page gets is an excellent

indicator of the value of then information contained on the website.

The combination of Lundahl/Mankovitz/Hong does not specifically disclose a database for storing

hit counts. However, It would have been obvious to one of ordinary skill in the art at the time of

the invention to modify Lundahl/Mankovitz/Hong because database functionality is an efficient

technique for saving and retrieving data.

28 Claims 9, 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lundahl et al. (US

2002/0107858 A1)

Claims 9 and 20:

With regard to the limitations of:

• the provision medium is provided with a questionnaire column for the information

receiver to write in usefulness of information, and

the information value estimating means adds the usefulness written in the questionnaire

column to a value of the information of the information provider to estimate the value,

See at least Lundahl, paragraph 0110.

Art Unit: 3609

29 Claims 10 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lundahl/Mankovitz/

Hong and further in view of Meyer (6915271)

Claims 10 and 21:

The combination of Lundahl/Mankovitz/Hong discloses the limitations as shown in the rejections

above. Lundahl/Mankovitz/Hong do not disclose:

the information value estimating means converts the value of the information into points

and calculates the points at a predetermined interval, and the privilege awarding means

awards the privilege based on the calculated points

Meyer, however in at least column 3, lines 1-13 calculating points and redeeming awards. It

would have been obvious to one of ordinary skill in the art at the time of the invention to modify

Lundahl/Mankovitz/Hong with Meyer because calculation of points is an efficient method to

redeem awards electronically.

Application/Control Number: 10/090,640

Art Unit: 3609

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should

be directed to Affaf Ahmed whose telephone number is 571-270-1835. The examiner can normally be

reached on Monday- Friday 7:30 AM- 5:00 PM EST, ALT Fridays Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James

Reagan can be reached on 571-272-6710. The fax phone number for the organization where this

application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application

Information Retrieval (PAIR) system. Status information for published applications may be obtained from

either Private PAIR or Public PAIR. Status information for unpublished applications is available through

Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at

866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or

access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
